**DETAILED ACTION**

***Election/Restrictions***

1. Applicant's election without traverse of claims 43-67 in the reply entered on December 29, 2005 is acknowledged.
2. Claims 21-42 are rejoined with claims 21-42, since the search was found sufficiently related in Class 341.

**EXAMINER'S AMENDMENT**

3. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Change the title to –Layout of dummy and active cells forming capacitor array in integrated circuit--.

Cancel claims 1-10 and 16-20 (being drawn to non-elected claims without traverse at page 3 of the communication entered December 29, 2005).

***Allowable Subject Matter***

4. Claims 21-67 are allowed.
5. The following is an examiner's statement of reasons for allowance:

While the prior art does disclose layout techniques for capacitor cells including dummy cells for balancing a capacitor array including the dummy cells, the prior art does not disclose applicant's claimed DAC or ADC, particularly characterized by a capacitor array having *both* visual and electrical symmetry of active unit cells arranged with dummy unit capacitor cells [e.g. Figs. 11B, 12B and 13B].

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

### ***Conclusion***

6. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. The 4 patent documents cited with this communication disclose background of D/A and A/D integrated circuits using a capacitor array, and balancing of capacitor arrays in the layout, but do not disclose the DAC or ADC having dummy cells arranged with active cells and dummy cells in the type of visual and electrical symmetry claimed.
